This week's executive summary

- China PE market was still in a correction this week with mixed prices. Participants priced lower in some regions as a weak buying interest. On the other hand, some traders attempted to raise offer prices slightly to test buyers' interest, driven by rising crude futures on Thursday; however, downstream industries were resistant to such higher price levels.
- Domestic producers roll over their offer prices mainly this week, and major distributors sold according to market trends.
- The PE import market continued to be in consolidation. Some overseas suppliers slightly declined the offers for September shipment, which did not obviously improve the market with limited decreasing degree.
- The outlook is bearish on Friday. Some participants consider that China PE market will in a downtrend because the tight credit lines should restrain buying interest, along with the increasing supply in the following weeks because domestic producers will finish their maintenances in September and October.
